Il nome della societa per cui lavorano le persone non puo essere pubblico di default, cosi come il nome non puo esserlo (nome si, cognome no magari)	Parti... ▾	As of now, it seems to me that we can only see the enterprise level option. Is the "enterprise/SME" button we were talking about yesterday on? meaning, as of now, have you classified the people in the database on whether they are part of the SME ecosystem, or the "private enterprise" (eg. only Hilti people)? I think we need that because then in the SME ecosystem, Il nome della societa per cui lavorano le persone non puo essere pubblico di default, cosi come il nome non puo esserlo (nome si, cognome no magari), etc.	No ▾
Add signup interface → creare interface che dia la possibilita ai clienti di signup direttamente dal sito. primi 3-6 mesi gratuiti? in generale, serve website dove gente puo vedere chi siamo e cose facciamo, e tramite il quale possa accedere al tool	Parti... ▾	We need to create the website landing page where people can schedule a demo, view our offering etc. content wise, pit and myself will feed the website after we have worked on the slides.	No ▾
immaginiamo che a settembre si lanci tutto ed iniziamo ad avere clienti che arrivano sia tramite demo che non. Come riusciamo a tracciare quanto sono attivi i clienti? riusciamo a creare una dashboard per noi come "owners" in cui possiamo vedere tutti i nostri clienti	No ▾	Yesterday we talked about having the following roles for our clients: - Admin (one or more people in each client's company has this profile and can manage some settings such as reward points for each meeting, default language, etc.) - Team lead: in the Team Insights dashboard can see both his own reports and the	No ▾

onboarded, quante sessioni fa ogni cliente (ie. societa, non singoli dipendenti), quanti membri onboarded vs. attivi, churn rate? → info fondamentali da presentare ad eventuali investitori. non necessaria per il momento - focus sul tool per ora -, pero utile da avere una volta che il software e' pronto per prod		ones below - Manager: can see only his own direct reports (if more than 3) - Employee: does not have team insights Now, I think we also need to create some visibility for ourselves. how do we do this? Can we create an interface for ourselves only where we can see general information about how the platform is doing in terms of interactions, usage, number of meetings, active users, etc. → action item for us all: decide on some KPIs? this dashboard will be our backbone for potential investor talks.	
con shift a Supabase (RLS), come siamo messi per Column level security? dobbiamo enforce Column level privacy per: reflections, ratings che si danno e ricevono post sessione, shadow role. Ad ora, sembra che ogni user loggato abbia modo di leggere queste info private di altri user (ad ora queste info sono nascoste sul browser, ma non sono protette nel database) Abbiamo modo di testare RLS? possiamo farlo io e pit o serve conoscenza tecnica per farlo? happy to learn how to do it.	No ▾	This point is important for the PMI/Enterprise level offering. for PMI clients, we need to have column level privacy for company name, role, position, reflections, ratings che si danno e ricevono post sessione, shadow role.	No ▾
followup session button available on the past meetings	No ▾		No ▾

1. Matching - how does it work? **TO BE TACKLED**

Is there a way for us to improve the matching? Just to understand, how does it currently work? how did it pickup the kindergarten thing? If i remember correctly you mentioned the similarity distance method. the first two proposed in the skill you are growing, i can understand, but the kindergarten one really not.

Also, similar reasoning for the ones we share and are able to teach. how did it pickup the healthcare suppliers? can we put a threshold of similarity below which skills cannot appear? like on powerquery fuzzy matching where by default it needs to match at least 80%

Weekly check-in
Two short answers help keep your mentoring matches current.

SCHEDULED

Mark as completed

Session remains there. i believe it might be it remains there until the other person also evaluated it. Can we change this? so that as soon as the person marks as complete the session goes in the past meetings session?

Also, when i tried to go in Iris D.'s (mentor in the above example) profile to validate and mark as complete the session from her side as well, i inserted the reflection and the system got stuck while "saving" (as you can see on the button as well)

PIT:

1. Knowledge Map - Huge feature imo - **TO BE ADDRESSED**

The whole idea of visualizing employees and skills as a living knowledge network is really cool, especially in the context of mentoring and knowledge sharing. What I like most is that even already now you can kind of start seeing clusters, central people, isolated expertise etc., so it already feels more alive than a normal org chart or database.

One thing I'd definitely improve though is the **navigability**. Right now the graph feels a bit static, whereas I think the real power would come from making it explorable exactly like the klassik Obsidian graph. I'd love being able to click and drag around freely, zoom in/out smoothly, move through the map with the mouse, hover over people/skills etc. Basically making it feel less like "a chart" and more like exploring a living ecosystem of knowledge.

Related to that, I think introducing more Obsidian-style graph physics could make a huge difference, especially around **repulsion and distance** between nodes. At the moment some areas feel a bit compressed visually, so stronger repulsion could help clusters emerge more naturally and reduce noise. One thing Obsidian does really well is creating that equilibrium where related nodes stay close but still have enough space to breathe visually.

I also think link distance itself could carry meaning. For example:

- people who mentor each other frequently = closer
- skills strongly associated together = closer
- weaker relationships = further apart

That way the positioning itself starts communicating information rather than being purely aesthetic.

The idea is that this will naturally surface really interesting organizational dynamics:

- knowledge hubs

- bridge people between teams
- mentoring bottlenecks
- isolated experts
- strong internal communities

Another idea I had is maybe eventually having multiple “views” of the same ecosystem.

- The current people ↔ skills map already works very well because it shows who knows what and who mentors on what.
- But I think a **people** ↔ **people** view could become insanely interesting too. In that case the skills disappear visually and instead become invisible connectors between employees. So people become connected because they exchange mentoring, share expertise, collaborate around similar competencies etc.

I honestly think that could become one of the most powerful views because it would reveal the *actual* knowledge structure of the company, independent from hierarchy.

- Also longer-term I think adding a temporal dimension would be sick: seeing how knowledge flows evolve over time, which skills become more central, who becomes increasingly connected etc. At that point it almost becomes a living organizational memory system rather than just a visualization.

Overall though I think this feature is massive.

The coolest part to me is that this doesn't just map what people know, but potentially how knowledge actually moves inside an organization. And I think that's where the real value is.

2. Admin KPI dashboard - **TO BE ADDRESSED**

Also I think the admin side could become really valuable if we add a proper dedicated dashboard layer instead of just an operational management page. Dunno if in the Administration section or Knowledge map one, but it would be cool to have a dashboard with KPIs that help answer questions like: Is mentoring activity growing or stagnating? Which skills are most in demand? Where are knowledge gaps appearing? Which departments are engaging the most? Are people actually returning for more sessions? Is knowledge spreading across the organization or staying siloed?

Some KPIs that could genuinely be useful:

- active mentors vs inactive mentors
- mentoring participation rate
- average session satisfaction/rating
- repeat mentorship rate
- average response time to mentoring requests
- most requested skills
- most shared skills
- skills with high demand but low mentor availability
- cross-department mentoring connections
- strongest knowledge hubs inside the company
- isolated employees / teams with low interaction
- growth of mentoring activity over time
- fastest-growing skill clusters
- mentor engagement over time

3. “Lost in translation” instances - in ITA version, still you can find some sentences in English around the platform - **TO BE ADDRESSED**

4. Personal availability - **TO BE ADDRESSED**

Secondo me manca anche tutta la dimensione dell'availability. Al momento il sistema sembra assumere che chiunque sia sempre disponibile a fare mentorship, ma nella realtà uno può essere:

- in vacanza,
- out of office,
- oppure semplicemente non disponibile per un periodo

Sarebbe bello avere una sezione semplice dentro “My Profile”, magari con icona calendario, dove uno può impostare periodi di indisponibilità o mettere in pausa le richieste mentorship. Ancora più figo (ma non ricordo se avessimo detto che era infattibile), long term: se riuscissimo un giorno a integrarci con Outlook/Google Calendar e capire automaticamente che una persona è OOO, allora MENT potrebbe temporaneamente smettere di suggerirla come mentor.

5. Self-imposed ambition - **THOUGHTS?**

L'idea di permettere alle persone di settarsi un obiettivo tipo “1 skill imparata al mese” o “2 conversations a settimana” secondo me è molto forte lato engagement e continuità. Potrebbe creare momentum, abitudine e anche un po' di healthy gamification. Però è una di quelle feature delicate, perché se il network non è ancora abbastanza denso rischia di generare l'effetto opposto: la gente si setta obiettivi che poi il sistema stesso non riesce a rendere possibili, e lì nasce frustrazione. Makes sense come direzione futura, ma magari inizialmente in forma più soft, tipo piccoli nudges o suggerimenti (“you're one session away from your goal”) invece di veri e propri target rigidi.
